

Prolonging Remission in Depressed Elderly (PRIDE) Trial

Project Name: Prolonging Remission in Depressed Elderly (PRIDE) Trial

Project Description: This study will determine, in a multicenter, randomized clinical trial, whether combined pharmacotherapy and ECT, individualized according to patient response, will be more effective in maintaining remission and in improving quality of life for older adults with severe mood disorders than pharmacotherapy alone.

Project Period Apr. 2009 – Apr. 2014

Funding Source: National Institute of Health / National Institute of Mental Health (NIH / NIMH)

Principal Investigators: Charles Kellner, MD, Study Co-PI
Mount Sinai School of Medicine

Sarah H. Lisanby, MD, Study Co-PI
Duke University
Columbia University and New York State Psychiatric Institute

Rebecca G. Knapp, Ph.D., Data Center PI
Professor of Biostatistics and Epidemiology
Medical University of South Carolina

Description of DCU Responsibilities: DCU is responsible for the study monitoring, data management, and information system infrastructure of this international multi-center trial involving 320 participants enrolled from 7 study sites in the United States.
